MEDICINES SECURITY INSTITUTE

MSI Outlook 01: From architecture to evidence

13 October 2026 | Institutional editorial perspective; not independently peer reviewed

The decision agenda

Connect the ten-domain framework with inspectable evidence records. Define each question, show the source and separate observed conditions from proposed responses.

Research priorities

Clarify risk ownership and assurance; distinguish viable capability from announced capacity; attach provenance, dates and uncertainty to intelligence.

Source foundation

DHSC and NHS England (2025), Managing a robust and resilient supply of medicines and accompanying data pack; WHO (2021), Ethics and governance of AI for health. Links are provided at medicines-security.org/outlook.

Next outputs

The draft Index methodology and evidence register invite critique. Country scores require indicator agreement, comparable data and independent review.

Limits and disclosure

This briefing sets an institutional agenda rather than reporting empirical findings. Named sources are not partners or endorsers. Author: Medicines Security Institute. Publication-specific funding and interests remain subject to verification.
